

# IF YOU CAN IMAGINE IT, WE CAN BUILD IT.

## THE LOAD BEAR WATER CARRIER. CUSTOM-DESIGNED EVERY TIME.

### BOTTLED WATER.

It's one of the fastest growing categories in the beverage business, and also one of the most demanding in terms of delivery requirements. Commercial. Residential. Up-and-down-the-street. Everything from 8-ounce to 5-gallon bottles. Going out and coming in. Let's face it, you need a bottled water body designed just for you, and that's exactly how we design our Load Bear Water Carrier.

## STANDARD MICKEY FEATURES

### Low-profile design

Allows for the most efficient working height in the industry.

### All-Weather Door Loc™ system

Full-length, full-contact extruded locking flap puts constant downward pressure on full width of door panel to minimize roller wear while providing a positive locking system.

### All-aluminum, uni-body construction

Mickey's aluminum bodies enable you to increase your payloads because they are built stronger and lighter than conventional aluminum bodies.

### Full-length, single-sheet floors

Integral longitudinal floor stiffeners distribute stress evenly and directly on chassis with a high density rubber pad between body and chassis. "Corrugated" system provides rigid and transverse surface that remains in full contact with product at all times. Floor pitch customized to specs.

**Additional 3/16" aluminum plate on floor and bay-back**  
Protects against rack damage.

### One-piece rear and front panel skins

Eliminates unsightly rivets to allow for rust-free surface and smooth application of decals.

### All-aluminum corner and intermediate machined castings

"Sleeve fitted" to rubrail, door tracks and door post to form a positive, stress-free connection to enhance strength and durability of the total unit.
