

The WORK BEAR Series

IF YOU CAN IMAGINE IT,
WE CAN BUILD IT.

STANDARD MICKEY FEATURES

All-Aluminum, Uni-Body Construction

MICKEY's aluminum bodies enable you to maximize your payloads because MICKEY's modular design bodies are built stronger and lighter than conventional aluminum bodies.

Low-Profile Design

Mickey's custom frame drop allows for the lowest and most efficient working height in the industry. With a Mickey Body more of your equipment will be accessible safely from ground level, saving time and effort when arriving on scene.

All-Weather Door Loc™ System

Single Full-length, (per side) full-contact extruded locking flap provides the ability to unlock all doors with a single locking handle. The extruded locking flap puts constant downward pressure on full width of door panel to provide a positive lock, while minimizing roller wear

Full-Length, Single-Sheet Floors

Integral longitudinal floor stiffeners distribute stress evenly and directly on the chassis with a high density rubber pad between body and chassis. The "Corrugated Floor System" provides rigid and transverse surface that remains in full contact with product at all times. Floor pitch can be customized to your individual specifications.

Full-Length, Single-Sheet Roof Panel

Reinforced roof for mounting equipment without disrupting the integrity of the roof seal. A full length heavy duty extruded roof rail provides impact protection as well as a superior mounting platform for light boxes and roof mounted equipment. Optional mounting points can be installed per request.

One-piece rear and front panel skins

Eliminates unsightly rivets to allow for rust-free surface and an unobstructed surface for mounting scene lights, bar lights and other equipment.

All-Aluminum Machined Intermediate And Corner Castings

Mickey's patented "Sleeve fitted castings" connecting to main rubrail, vertical door tracks and door track post to form an integrated, stress-free connection to enhance strength and durability of the total unit.

Family Owned and Operated Since 1904

MICKEY, THE CHOICE FOR QUALITY

Full side door accessibility in addition to a transverse front and rear bay (lower). Rear doors access secure center "A" frame tunnel storage for shoring timbers, ladders, plywood etc. Walk ramp stored below bins allows quick and easy access to timbers Custom configurations can be designed to accommodate specific requirements.

Light duty 6 bay unit with optional rear access to full length storage compartment. Roll up doors provide full side access.

Heavy duty units include a full line of trailers to help you in bringing the equipment you need to the scene quickly and efficiently. Unit shown above has full walk in capability, with center mounted timber storage, side access shelving, and a forward command center.

Rear drop frame supports rear command centers and/or transverse bays

Light, Medium, and Heavy Duty units available (bodies 10 to 26ft. long) can be configured for all your needs. MICKEY engineers will work with you to develop a layout for your equipment needs, from generator mounts to timber storage to SCBA racks, and every thing in between. Rear command centers are available in both bodies and trailers.

Standard Features

- ✓ Custom bay configuration to your specification
- ✓ One-piece aluminum roof
- ✓ Heavy duty extruded rub rails
- ✓ Heavy duty aluminum rear bumper

- ✓ Standard bay depth 42"
- ✓ Standard door openings 76-88"
- ✓ All ICC lights, high/low stoplights & turn signals - LED's
- ✓ Aerodynamically designed, extruded roof rail
- ✓ All welded modular construction

- ✓ Custom painted
- ✓ Electric back-up alarm
- ✓ Recessed, extruded door track

Optional Features

- Custom door openings
- Adjustable hinged shelving
- shelves for dividing bays
- Heating systems
- Hand truck racks or compartments
- Custom painting & lettering
- Decal applications
- Felt side seals in door track
